Scan of 174.138.22.194

Scan details

Scan information	
Start time	2025-08-29T15:10:26.210714-04:00
Start url	https://174.138.22.194/
Host	174.138.22.194
Scan time	603 minutes, 5 seconds
Profile	Full Scan
Server information	nginx/1.29.1
Responsive	True
Server OS	Unknown
Server technologies	PHP
Scan status	failed
Application build	24.10.241106172

Threat level

Acunetix Threat Level 4

One or more critical-severity type vulnerabilities have been discovered by the scanner. A malicious user can exploit these vulnerabilities and compromise the backend database and/or deface your website.

Alerts distribution

Total alerts found	18
 Critical	1
 High	0
 Medium	7
 Low	6
 Informational	4

Affected items

/comments.php	
Alert group	SQL Injection
Severity	Critical
Description	SQL injection (SQLi) refers to an injection attack wherein an attacker can execute malicious SQL statements that control a web application's database server.
Recommendations	Use parameterized queries when dealing with SQL queries that contain user input. Parameterized queries allow the database to understand which parts of the SQL query should be considered as user input, therefore solving SQL injection.
Alert variants	
Details	<p>URL encoded GET input since was set to @@ClhiL</p> <p>Error message found:</p> <p>You have an error in your SQL syntax</p>

/themes/modus/css/open-sans/	
Alert group	Active Mixed Content over HTTPS
Severity	Medium
Description	Active Content is a resource which can run in the context of your page and moreover can alter the entire page. If the HTTPS page includes active content like scripts or stylesheets retrieved through regular, cleartext HTTP, then the connection is only partially encrypted. The unencrypted content is accessible to sniffers.
Recommendations	There are two technologies to defense against the mixed content issues: - HTTP Strict Transport Security (HSTS) is a mechanism that enforces secure resource retrieval, even in the face of user mistakes (attempting to access your web site on port 80) and implementation errors (your developers place an insecure link into a secure page) - Content Security Policy (CSP) can be used to block insecure resource retrieval from third-party web sites - Last but not least, you can use "protocol relative URLs" to have the user's browser automatically choose HTTP or HTTPS as appropriate, depending on which protocol the user is connected with. For example: A protocol relative URL to load an style would look like >link rel="stylesheet" href="//example.com/style.css"/<. Same for scripts >script type="text/javascript" src="//example.com/code.js"<>/script< The browser will automatically add either "http:" or "https:" to the start of the URL, whichever is appropriate.
Alert variants	
Details	<p>The following issues were detected:</p> <ul style="list-style-type: none"> The tag iframe references the resource http://ghbtns.com/github-btn.html?user=FontFaceKit&repo=open-sans&type=watch&count=true The tag iframe references the resource http://ghbtns.com/github-btn.html?user=FontFaceKit&repo=open-sans&type=fork&count=true

Web Server	
Alert group	SSL Untrusted Root Certificate

Severity	Medium
Description	Acunetix detected that the SSL Certificate is not signed by the trusted root.
Recommendations	The process of fixing untrusted root certificate issues varies depending on the host or the certificate authority used. Please refer to the corresponding documentation.

Alert group	Cookies with missing, inconsistent or contradictory properties (verified)
Severity	Low
Description	At least one of the following cookies properties causes the cookie to be invalid or incompatible with either a different property of the same cookie, of with the environment the cookie is being used in. Although this is not a vulnerability in itself, it will likely lead to unexpected behavior by the application, which in turn may cause secondary security issues.
Recommendations	Ensure that the cookies configuration complies with the applicable standards.
Alert variants

/themes/modus/css/open-sans/	
Alert group	Insecure Frame (External) (verified)
Severity	Low
Description	<p>The web page was found to be using an Inline Frame ("iframe") to embed a resource, such as a different web page. The Inline Frame is either configured insecurely, or not as securely as expected. This vulnerability alert is based on the origin of the embedded resource and the iframe's sandbox attribute, which can be used to apply security restrictions as well as exceptions to these restrictions.</p>

Recommendations	Review the iframe's purpose and environment, and use the sandbox attribute to secure the iframe while applying sandbox directives to ease security restrictions if necessary.
Alert variants	
Details	An iframe tag references an external resource, and no sandbox attribute is set.

Alert group	Programming Error Messages
Severity	Low
Description	<p>This alert requires manual confirmation</p> <p>Acunetix found one or more error/warning messages. Application error or warning messages may expose sensitive information about an application's internal workings to an attacker. These messages may also contain the location of the file that produced an unhandled exception. Consult the 'Attack details' section for more information about the affected page(s).</p>
Recommendations	Verify that these page(s) are disclosing error or warning messages and properly configure the application to log errors to a file instead of displaying the error to the user.

Web Server	
Alert group	Version Disclosure (PHP)
Severity	Low
Description	The web server is sending the X-Powered-By: response headers, revealing the PHP version.
Recommendations	Configure your web server to prevent information leakage from its HTTP response.
Alert variants	
Details	Version detected: PHP/8.3.19 .

Web Server	
Alert group	Content Security Policy (CSP) Not Implemented
Severity	Informational

Description	<p>Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks.</p> <p>Content Security Policy (CSP) can be implemented by adding a Content-Security-Policy header. The value of this header is a string containing the policy directives describing your Content Security Policy. To implement CSP, you should define lists of allowed origins for the all of the types of resources that your site utilizes. For example, if you have a simple site that needs to load scripts, stylesheets, and images hosted locally, as well as from the jQuery library from their CDN, the CSP header could look like the following:</p> <div><pre>Content-Security-Policy: default-src 'self'; script-src 'self' https://code.jquery.com;</pre></div> <p>It was detected that your web application doesn't implement Content Security Policy (CSP) as the CSP header is missing from the response. It's recommended to implement Content Security Policy (CSP) into your web application.</p>
Recommendations	<p>It's recommended to implement Content Security Policy (CSP) into your web application. Configuring Content Security Policy involves adding the Content-Security-Policy HTTP header to a web page and giving it values to control resources the user agent is allowed to load for that page.</p>
Alert variants

Web Server	
Alert group	Generic Email Address Disclosure
Severity	Informational
Description	One or more email addresses have been found on this website. The majority of spam comes from email addresses harvested off the internet. The spam-bots (also known as email harvesters and email extractors) are programs that scour the internet looking for email addresses on any website they come across. Spambot programs look for strings like myname@mydomain.com and then record any addresses found.
Recommendations	Check references for details on how to solve this problem.
Alert variants

Web Server	
Alert group	Insecure Referrer Policy
Severity	Informational
Description	Referrer Policy controls behaviour of the Referer header, which indicates the origin or web page URL the request was made from. The web application uses insecure Referrer Policy configuration that may leak user's information to third-party sites.
Recommendations	Consider setting Referrer-Policy header to 'strict-origin-when-cross-origin' or a stricter value
Alert variants	
Details	<p>URLs where Referrer Policy configuration is insecure:</p> <ul style="list-style-type: none"> • https://174.138.22.194/identification.php • https://174.138.22.194/ • https://174.138.22.194/_data/i/upload/2025/08/23/ • https://174.138.22.194/index.php • https://174.138.22.194/axis2/axis2-admin/welcome • https://174.138.22.194/register.php • https://174.138.22.194/lc/system/console • https://174.138.22.194/lc/system/_data/i/upload/2025/08/23/ • https://174.138.22.194/lc/system/themes/modus/css/open-sans/open-sans.css • https://174.138.22.194/tomcat/host-manager/html/ • https://174.138.22.194/ui/authentication/ • https://174.138.22.194/server/TCPIPGEN.htm • https://174.138.22.194/opennms/login.jsp • https://174.138.22.194/system/console • https://174.138.22.194/host-manager/html/ • https://174.138.22.194/clientaccesspolicy.xml • https://174.138.22.194/manager/status/ • https://174.138.22.194/cognos_express/manager/html/ • https://174.138.22.194/about.php • https://174.138.22.194/notification.php • https://174.138.22.194/comments.php
